

**IMSOGLO****GLOBAL SOIL THREATS AND ECOSYSTEM SERVICES****COURSE DESCRIPTION (2019)**

<b><u>Course information I</u></b>	
<b>Course name</b>	Global Soil Threats and Ecosystem Services
<b>Point(s) (ECTS)</b>	10 ECTS (Study time 280 h, Contact hours 70 h)
<b>Institute</b>	Agroecology
<b>Primary programme</b>	EMJMD in International Master of Science in Soils and Global Change
<b>Forms of instruction</b>	Self-study – 40%; Lecture/Class room instruction – 30% Seminars/Practical – 20% Guidance (coached exercises) – 10%
<b>Qualification description</b>	<p><i>Course Objectives</i></p> <p>The course provides students with critical analyses of the threats facing soils globally, discusses mitigation and prevention measures, and a general overview of the numerous ecosystem services provided by soils. The course will also provide a fundamental understanding of the measurement and modeling methods used to characterize the soil properties and processes that are critical to assessing the threats to the soil's optimal provision of the ecosystem services.</p> <p><i>Learning Outcomes/Final Competencies</i></p> <p>At the end of the course the student should be able to:</p> <ul style="list-style-type: none"> <li>(i) Explain the importance of soils in provision of ecosystem services</li> <li>(ii) Explain the anthropogenic and natural threats facing soils worldwide</li> <li>(iii) Use the appropriate methodology to quantify soil functions and identify different soil degradation types</li> <li>(iv) Elucidate measures to prevent the degradation of soil</li> <li>(v) Suggest practical solutions for mitigating the threats to soils</li> </ul>
<b>Comments on teaching</b>	The course combines theoretical lectures, laboratory/field exercises, data analyses and modeling exercises, field excursions and project reports.
<b>Prerequisites</b>	It is assumed participants have basic knowledge in soil science, as well as some soil physics and soil chemistry courses
<b><u>Course information II</u></b>	
<b>Semester (s)</b>	Autumn
<b>Language of teaching</b>	English
<b>Hours – weeks – semester (s)</b>	2 hours lecture and 4 hours of exercises per week. Five full days of practical exercises at AU research center - Foulum
<b>Course content</b>	The course focuses on identifying, quantifying and suggesting solutions to the threats affecting soils' provision of ecosystem services. Important threats that will be covered include (but not limited to) soil compaction and sealing, decline in organic matter content, loss of biodiversity, soil contamination, soil salinization

	<p>and desertification. Discussions will be conducted from a global perspective, considering the main threats prevalent in different regions in the world. An important aspect of the course will focus on outlining prevention and mitigation approaches to these threats.</p> <p>Ecosystem services that will be covered in the course will include provisional services (food, biomass, genetic, medicinal and other resources); regulatory and support services (air quality, erosion, climate, pollination, water storage and filtration, nutrient cycling, etc.), and cultural services.</p> <p>The experimental and data analyses parts of the course focus on describing and understanding concepts such as water and air storage and transport and how this relates to the soil's regulatory services. In addition, the latest knowledge on diffusive and convective transport of air and water in relation to pore characterization and the soil's role as a filter will be presented. Field visits and experiment will explore how the soils responds to contamination, pollution, and the soil's ability to transport and degrade nutrients, and pesticides. Finally, Mathematical models describing the soil's physical processes will be presented in the context of quantifying the effects of soil degradation on its provision of ecosystem services.</p>
<b>Teacher</b>	<p>The teaching will be conducted by experts in the individual areas:</p> <p>Lis Wollesen de Jonge – Responsible</p> <p>Mogens Greve</p> <p>Bo Vangsø Iversen</p> <p>Lars Munkholm</p> <p>Mathieu Lamandé</p>
<b>Literature</b>	<ol style="list-style-type: none"> <li>1. <b>Maximum enrolment</b>	25
<b>Location</b>	Campus Aarhus & AU Foulum

<b>Assessment (form of examination)</b>	
<b>Grading</b>	Internal co-examination
<b>Assessment</b>	7-point grading scale

<b>Notes</b>	Examination will be based on the submitted reports and the entire curriculum
<b>Prerequisites for examination participation</b>	Approved participation in practical exercises and submitted project report
<b><u>Exam</u></b>	
<b>Examination type</b>	Oral
<b>Name</b>	Set oral examination
<b>Exam time</b>	30 min
<b>Preparation time</b>	None
<b>Aid</b>	None
